----------WARNING!----------

Do Not Over Fill!

Dear Valued Customer:

Congratulations on purchasing an Adagio water feature. Our rigorous design and manufacturing standards allow us to produce goods of the highest quality. If used as instructed, we are confident your new water feature will provide years of worry-free enjoyment. We remind you to give careful heed to the "**WARNING**" sticker attached to the water feature's plastic liner.

Removal of this sticker will void your warranty. The warning sticker serves as a continual reminder to **not** overfill the product as doing so may cause leaking and/or damage.

The water reservoir has 2 components: the inner plastic liner and the outer metal housing. The plastic liner is water-tight but shorter than the metal housing. If you overfill the plastic liner, water will be trapped between the plastic liner and the metal housing and the reservoir will leak because the metal housing is not water-tight.

Remember to fill the tray with water when the water feature is turned off.

Thank you for your attention to this important matter, and thank you for choosing Adagio.

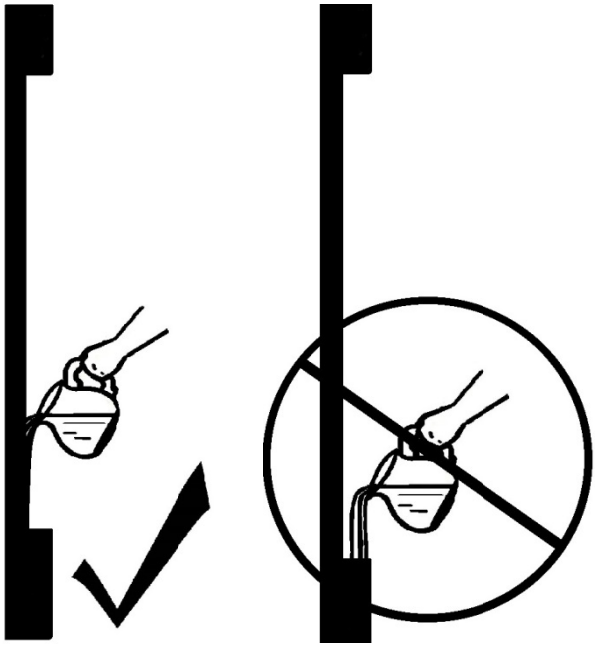

Do Not Fill Improperly!

Leaking and/or damage may also be caused by improperly filling the fountain.

Fill by pouring water on the fountain surface (Stone, glass, etc..)

Do not fill by pouring water on the pebbles! Pouring water on the pebbles may splash water on your floor. It may also splash water between the plastic liner and the metal housing and the reservoir will leak because the metal housing is not water-tight.

Correct **Incorrect**
